Hello,

Our engineer is working on a detailed report from the visit at Libman's. He works with a number of clients, so I know his schedule has been backed up. Once we have that, we will share that with you. Do you have any other specific questions other than those below that you need the engineer or the City to respond to?

Thanks,

Bill

Thank you Mr. Wagoner.

I wanted to see your engineer's treatment evaluation report.

I am not so sure if just a walking around consist of that report.

I want a detailed engineering evaluation of Libman's pretreatment capability to treat and whether their systems are properly designed and operated as should.

And I want to know when City required to operate microfiltration systems before discharging into POTW.
What were the rationale for that? I want some supporting information and detailed reports.

Do you know if you are planning to update your sewer user ordinance (SUO) sometime soon?

Please let me know that schedule and if your SUO is adequately revised and updated to do what it should do?

Are all necessary parameters are identified and if working properly?

Also please let me know if you have any concerned pollutants coming from any industries and how do you manage and what do you do?

Do you go out for any samplings? Who do that samplings, if any?

I would need to find out all those to do my work.

Please let me know if you have any concerns or questions.

Thanks much,

Sangsook Choi
Engineer

Subject: Libman Visit - Arcola

The City of Arcola pulled a sample from the Libman source discharge. We tested for chlorine, phosphate and pH. The phosphate and chlorine registered negative. The pH was neutral.

Thanks,
